

3C METAL ESTABLISHES ENTITY IN TÜRKİYE

3 July, 2026

3C Metal has officially established its Turkish entity, 3C Metal Turkey Enerji Anonim Şirketi (A.Ş.), marking an important step in the company's regional growth strategy. The entity is headquartered in Istanbul and will support the delivery of energy and industrial infrastructure projects across Türkiye and the wider region.

The establishment of 3C Metal in Türkiye reflects 3C Metal Group's continued activity in the country in recent years and supports the company's strategy to expand its regional presence, improve project delivery capabilities and increase local content participation.

3C Metal Group Managing Director, Philippe Boy, said the development represents a natural progression of the company's activities in the country and reflects its long-term commitment to the market.

"3C Metal has been active in Türkiye for the past several years, and establishing a permanent presence in the country is a natural next step from both an operational and strategic perspective," Mr Boy said.

"I want to extend my gratitude to our team, particularly to Yannick Damry for his efforts in establishing the entity and to the Ortec Group for its support throughout the process. The establishment of the new entity supports our long-term strategy, increases our ability to meet local content requirements and enhances the value we deliver to our clients," he said.

3C Metal Managing Director for the Middle East and Asia, Yannick Damry, said, "Türkiye offers opportunities across our core oil and gas business as well as broader energy sector developments. Strengthening our foothold in the country is an important step given our growing project activity."

Since entering the market, 3C Metal has been involved in offshore energy projects in Türkiye, including the ongoing FPU Osman Gazi installation work in Filyos. The project includes the installation of structural and piping systems and is being delivered by a multinational team comprising personnel from 3C Metal and the Ortec Group, including local personnel. 3C Metal is also supporting the Sakarya Phase 2 development in the Black Sea, a key offshore gas project in Türkiye.

Through its Turkish entity, 3C Metal will support onshore and offshore projects with engineering and fabrication teams providing a range of services including engineering, project management, deployment, 3D laser scanning surveys, piping and structural fabrication.

About 3C Metal: Established in 1995 in France, 3C Metal is a global leader in providing sophisticated engineering services to the onshore and offshore oil and gas industry. In recent years, the company has extended its services to other areas of the energy sector, including the petrochemical, renewable energy, power generation, marine and mining industries. 3C Metal specializes in steel fabrication, with a core specialty of high-pressure piping processes and techniques. Its services include project management, engineering, procurement, manufacturing, installation and inspection. www.3cmetal.com
